Optimus Yellow Data Logging Sound Level Meter

Features

- Simple to use
- Simultaneous measurement of all parameters
- 120 dB measurement range
- Data logging with VoiceTag (audio notes)
- A, C and Z weightings
- Fast, Slow and Impulse response
- Bluetooth connection to mobile app

Applications

- Basic noise surveys
- Noise ordinance enforcement
- Fire alarm testing
- Machinery maintenance and trouble-shooting

Optimus Yellow

The CR15xB Optimus Yellow is a calibrated, professional grade sound level meter for noise measurements that must meet the relevant international standards. Despite being a powerful meter it is extremely easy to use, ensuring you get the correct measurements from the start.

The Optimus range of sound level meters uses the latest display technology and digital signal processing (DSP) techniques to provide you with a very powerful yet easy to use meter. The ease of use comes from the fact that all parameters are automatically measured at the same time, so no need to think about what you need in the split second before starting the measurement.

Making Noise Measurements

Making measurements usually consists of checking the calibration (adjustments are automatic), recording a voice tag if required, and then taking the readings.

As this meter is a data logger all the measurement parameters are stored along with time, date and other relevant information.

Future Upgrade

If you decide at a later date that you need an Integrating sound level meter or even octave band filters then we offer a simple upgrade path.

These features can be added at a later date. Some can even be fitted without returning the meter to the factory by remote update.

We can even change the meter from Class 2 to Class 1, although of course it must be returned for this upgrade.

Visit the **Options** tab for more details.
